

# Safety

## Shower-proof Cardboard Wheel and Handle

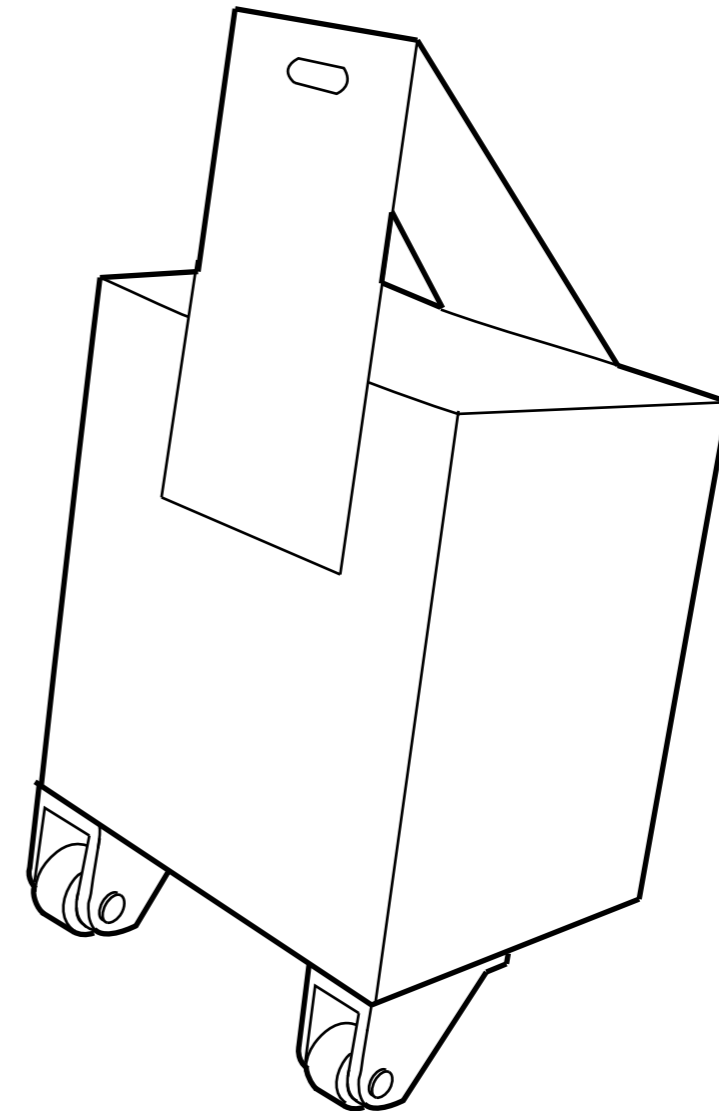

Do not overload yourself, or the product. A 40lb, 20Kg load can be considered an absolute maximum.

The components use a pressure-sensitive adhesive, so a very firm, even pressure needs to be applied. Always test the integrity of the bond before use.

The handle and wheels are coated to make them 'shower-proof'. They are also designed to disintegrate when submersed in water for the purpose of recycling, so deep puddles should be avoided.

Please lift the assembled Move-it box-trolley up and down stairs and kerbs to avoid possible damage.

# Move-it Wheel and Handle kit

## Instructions and Safety

Designed and manufactured in the UK

Patent no. GB0910954.7
